

GET GREEN GET SERIOUS GET INTERNATIONAL

We first introduced Omega 3 eggs to Greece in 1997 and now our student-run farm produces 5.5 million Omega 3 eggs for commercial sale. Be part of our continuous history by interning in our poultry division!

Where?

Perrotis College, tertiary component of the American Farm School in Thessaloniki, Greece. Our diversified education and research farm & fields are a living laboratory for students of all ages. Since our founding, 115 years ago, the Farm has provided students with hands-on experiences that amplify academic learning, bridge disciplines, and spark science-driven innovation.

 2 positions open for the Spring Term 2018
(Jan. 29 until April 27) - 13 weeks

 Get a feel for what it's like to work
in your desired field and do so in Greece!

 1 position open for the Summer Term 2018
(May 21 until June 29) - 6 weeks

 Gain global awareness &
Create an international network

 Register for academic credit - if you want!

Watch chicks emerge from their shells after you learn how to inspect the eggs and use the machinery. Care for the eggs, even those that do not house chicks. Interns work on the farm in chicken processing, egg processing, and assisting with packaging and labeling of eggs to be marketed and sold. They learn daily follow-up on chickens' health, connecting them further with agricultural productions to the importance of the farm to fork movement. It isn't only humans being fed, though – interns will also learn how to use the school's specialized machinery to work all phases of the feeding manufacturing process.

Note: The chick hatching aspect of the internship is only available during spring term; all other aspects are available year-round.
